THE SURGICAL BUCKET

The Surgical Bucket (SB) should be constructed in the following manner:

- Cut a one-gallon milk or water jug in half
- Glue, or Velcro the bucket on a board or tile (for weight/stabilization)
- Label accordingly:
  - Sides have one hole lower-center and are labeled with A, B, C, D
  - Each side has 4 holes, labeled 1-4
  - Base is lettered a-h with Velcro above letter

- Side photo of one side of the jug: orange spots are where holes should be placed

Bucket can be used for:
- Stapled Bowel Anastomosis Model—for deep practice
- Deep Vascular Anastomosis Model
- Figure 8-Deep Suture Ligation Model
- Clamp & Tie Model
