From the Director — Comings and Goings

It was the best of times, it was the worst of times . . .
The last couple of months have been very kind to the Spencer S. Eccles Health Sciences Library's faculty and staff. We have received awards, been issued several federal contracts and have gotten more renovations achieved. On the other hand, we lost a very important member of our faculty, the first Eccles Library director, Priscilla Mayden.

The good news first —

NLM & You Contest Winners
This is the 175th anniversary of the National Library of Medicine (NLM). As part of the anniversary celebrations, NLM sponsored a video contest entitled NLM & You. NLM wanted original short videos produced that increased awareness of their many products and services. The Eccles Library and the Department of Biomedical Informatics partnered to create James and the Peanut Allergy which can be viewed on YouTube. Thanks to Nancy Lombardo, her son James, his school friends and especially to Derek Cowan, the video producer and first time star in his own production, James and the Peanut Allergy won first place in the contest. It was shown as the kick-off event at the recent national Medical Library Association Annual Meeting in Minneapolis, MN. To view NLM's news release about the award, see http://www.nlm.nih.gov/news/video_winners.html. We are so proud - be sure to take a look at our award winning video!

Regional Medical Library and NLM Training Center Contracts Awarded
And speaking of NLM, we received another five-year contract to serve as the MidContinental Regional Medical Library within the National Network of Libraries of Medicine. This will be our third contract as the MCRML as we started our 11th year May 1st. We are delighted to be able to work with librarians and their staff within our six-state region to promote NLM products and services and to ensure access to all to quality health information. The six states include Utah, Colorado, Kansas, Missouri, Nebraska, and Wyoming. Within each of these states, we have Resource Libraries that help to carry-out the mission and that house liaisons who work under contract for us. We are grateful for their assistance and support.

For more information about the NN/LM, refer to http://nnlm.gov/.
We are very honored to announce that we have also successfully competed to serve as the National Library of Medicine Training Center, the only one in the nation. Since the start of the Training Center, the New York Academy of Medicine held this distinction. We are only the second institution to be awarded the contract in its entire history. What does this Center do? As part of the NN/LM, it provides training to both health care professionals and library staff about NLM products and services, including PubMed. While historically the trainings were in-person classes, with this contract, more emphasis will be placed on distance learning classes and online tutorials.

We are pleased to welcome Sharon Brown to the Eccles Library faculty. She has been a trainer with the Center for many years and will reside in New York City while fulfilling her responsibilities. We are recruiting for additional faculty and staff to meet the many contract requirements. Our appreciation is extended to Sharon Dennis, who wrote the contract proposal and will be leading its training initiatives for the next five years.

**Update on Library Renovations**

With power installed now to the compact shelving in the lower level of the Library, we hope to soon be able to reopen our print collection. We need some temporary walls placed in order for the rest of the level to receive even more renovations as we install a research support center or incubator and offices for the CTSA administration. Once the temporary walls are installed, you will once again be able to browse through the books and journals. We also have ordered new modular furniture for the main level that will include 4 pods of 6 cubicles each, some of which can be made private through the use of movable screens. We also anticipate the start of building of staff offices on the upper level in the very near future. Stay tuned!

And now for the sad news —

As many of you may have heard, we are mourning the passing of the first director of the Spencer S. Eccles Health Sciences Library, Priscilla M. Mayden. Below is a short summary prepared by Joan Stoddart of several of the contributions Priscilla made over her years, but her influence has never really stopped. Recently, I attended a meeting of the different library directors throughout the Salt Lake City metro area, and one from Park City told everyone about how the recent Mayden Lecture encouraged her staff to redesign their library's website. The Mayden Lecture series has been revered by many; it was established in Priscilla's honor at her retirement.

I had the great opportunity to meet Priscilla a couple of years ago and got the chance to see how powerful of an individual she was at 90. I can only imagine and appreciate her influence during her years as Director of the Eccles Library. I feel that I, the faculty and staff and the users of the Library are benefiting from her vision for the physical building and for the value of information. Due to her foresight, the now forty-year old library (see article about our 40th anniversary) has been easy to transform into the needs of a 21st century library. I especially appreciate her awareness that as many electrical outlets as possible should be placed along the walls.
It has been a delight to read the many memories shared by her peers about Priscilla. I know we all have lost a great visionary, a wonderful spokesperson, a mentor, and a delightfully gracious individual. May we relish in our fond memories and appreciate the legacy she has left to gain the knowledge needed to make this world a better place for all of us.

Thank you Priscilla!

**Priscilla Remembered by Joan Stoddart . . .**

Priscilla M. Mayden, who served as the first Director of the Spencer S. Eccles Health Sciences Library, passed away this month at the age of 93.

Priscilla Maltby Mayden was born in 1918 in Stoughton, Massachusetts. She received her B.S. from Simmons College in 1941 and her M.S. in Library Science from Columbia University in 1967. She was Hospital Librarian in the Women’s Army Corps, United States Air Force Redistribution Center, Santa Ana, California from 1944-1946, the Chief Librarian at the Veterans Administration Hospital, Bedford, Massachusetts from 1946-1952 and Chief Librarian at the Veterans Administration Hospital in Salt Lake City, Utah from 1952-1966. She came to the University of Utah as the Medical Sciences Librarian and then became Director of the Spencer S. Eccles Health Sciences Library 1966-1985. Ms. Mayden was a member of the Medical Library Association Board of Directors, 1975-1978 and became a Fellow in the Association in 1983. She was also Chair of the Utah Academic Library Consortium 1972-1973 and President of the Utah Library Association 1961-1962.

Priscilla’s friends and colleagues established the Priscilla M. Mayden endowment in her honor upon her retirement in 1985. This lectureship has allowed the Eccles Library to invite knowledgeable and exciting speakers among others such as Dr. Joyce Mitchell, Chair of the University of Utah's Department of Biomedical Informatics, who spoke last year about Genetics, Genomics and Biomedical Informatics, and Dr. Ed Shortliff from Columbia University who spoke a few years earlier about the National Health Information Infrastructure.

Priscilla was a visionary in her time, understanding the emerging role of computers in libraries and in healthcare at the bedside. She started the Hope Fox Eccles Clinical Library in the University Hospital in 1983 which served clinical staff by providing access to resources and services, and literature search capability close to the bedside. This library has recently been relocated and redesigned as the Hope Fox Eccles Health Library and now serves the health information needs of patients and families of University Hospital.

The [obituary for Ms. Mayden](http://ojs.med.utah.edu/index.php/esynapse/rt/printerFriendly/180/291) was recently posted on the *Salt Lake Tribune* website.
Jackie A. Smith — Library Champion

The Spencer S. Eccles Health Sciences Library salutes our Library Champions. This month we feature Jackie A. Smith, Ph.D.

Dr. Jackie A. Smith is a professor (clinical) in the College of Nursing at the University of Utah. Prior to joining the College in 2000, she was the patient education coordinator at University of Utah Hospitals and Clinics where she earlier served as the quality resource coordinator and project facilitator for the Strengthening Hospital Nursing Program. She has a wide variety of experience in the community, hospital, and academic environments. She has served as a disease control educator, executive director of the Governor’s Council on Health and Fitness, health care consultant, grants officer, project administrator for the Health Professions Academy and adjunct assistant professor in the University of Utah Department of Health Education and the Marketing Department in the School of Business. At the College of Nursing she teaches courses in the undergraduate, masters and doctor of nursing practice levels. Classes include: Global and Community Epidemiology, Introduction to Clinical Epidemiology and Population Science, Evidence-based Practice, Program Planning and Development, Program Management and Evaluation.

Dr. Smith received both a B.S. degree and M.H.Ed. at Brigham Young University in community health education. She obtained her Ph.D. degree at the University of Utah in health education with allied areas in marketing and communication. She later did post-doctoral work in marketing at the University of Utah David Eccles School of Business.

We asked Jackie Smith to tell us, in her own words, why she is an Eccles Library Champion.

Tell us why the Eccles Library is your best friend.
My experience with the Eccles Library extends well over the last 20 years. Library personnel are always available to help me professionally and even personally. When I had a sudden job change in 2000, library administration quickly came to my aid so we could complete our National Library of Medicine funded project and I could continue in a new role at the University of Utah.
Why do you support the Eccles Library?
The library is an excellent resource for nurse educators and researchers. Library personnel are extremely knowledgeable, people oriented, and technology savvy. They are outstanding knowledge workers and willingly share this knowledge with all of their patrons, including those in at the University and in the community.

How has the Eccles Library helped you do your job?
Jeanne Le Ber, Alice Weber, Mary Youngkin and others provide excellent computer-based classes for my students on how to conduct literature searches and locate best evidence for practice. At times, due to large class sizes, several librarians are brought in to teach so that every student can use a computer and receive individualized instruction.

The library sponsors a wide variety of excellent seminars and forums. At one forum I learned about the use of technology for interactive learning. At the end of the seminar, I briefly spoke to Nancy Lombardo about a patient education workshop that had been developed and inquired if this might be a candidate for the interactive learning technology. Soon thereafter, Nancy gathered a team of experts from the library and secured funding for the project. The product was the Patient Education Workshop on CD ROM. It is widely used in hospitals and clinics throughout the United States and Canada.

In another situation, library employees were quick to respond to an opportunity to test the use of PDA (handheld device) technology in clinical nursing education. They actively took a leadership role not only with the education process, but also with understanding the technology, helping to write the proposal for funding, and implementing the project. Thanks to Alice Weber's leadership, this project ended up being very successful.

What are the top three library services you use?
The three main services I use are:

1. Assistance in locating materials for teaching. Library employees are always willing to help me as a faculty member to find the perfect video or article for class. Their can do attitude has saved the day on many occasions.

2. Providing expertise and service on interdisciplinary committees. They always take an active (participatory) role on committees and make significant contributions to make things happen.

3. Providing computer support. They are well-known for making things work in the HSEB without embarrassing the technology novice.

What will the library look like in the near and distant future?
Clearly, the library will continue to take the lead in technology and in providing health information for students, faculty, and consumers. In addition, library staff will become increasingly recognized as leaders in all areas of health sciences education. I am particularly excited about the new Hope Fox Eccles Health Library located near the lobby of University Hospital. This offering extends the reach of the Eccles Library by offering easily accessible health information to patients, families, and the general
community.

**How do you describe the Eccles Library to others?**
The library is user-friendly. While the library has all of the features of a *regular library*, this library is much, much more. Avenues for health sciences information have now been opened through computer access, sophisticated retrieval systems, and educational offerings.

**What information seeking/using advice would you offer to today's health sciences students?**
I would encourage all students and my colleagues to become acquainted with and take advantage of all of the many offerings at the library. The things learned from the library staff are lifetime learning skills that will last throughout one's career.

**What is the best information advice you every got?**
In thinking back, I remember a time when information I obtained at the Eccles Library helped me make a decision about a suggested surgery. After a terrible accident and severe injuries, my physician thought a particular surgery (viewed as experimental by my insurance company) might be helpful. I decided to investigate the surgery by going to the Eccles Library. The librarian assisted me in locating current articles and books. With this information, my physician and I decided not to go through with the surgery. Over time, I learned that this decision was, in fact, the right decision. I am so grateful for the way the librarian listened to my concern and the led me to current information.

**What do you do for fun?**
Hiking, snowshoeing, walking, canoeing, camping, gardening, listening to music, learning to play the guitar.
Jackie hiking in redrock country

JAS - May 26, 2011
Introducing . . . Erica Lake

The "Introducing . . ." column is a regular feature that profiles an employee of the Spencer S. Eccles Health Sciences Library. It is a way of introducing our staff to you. This month features librarian Erica Lake.

Erica Lake joined the faculty at the Spencer S. Eccles Health Sciences Library on March 7, 2011 as Associate Director of the new Hope Fox Eccles Health Library, located off the main lobby in the University Hospital. In this role, Erica will strive to ensure that patients, their families, and the general community have access to the services and resources they need to make informed choices about their health care.

Prior to joining the faculty at Eccles Library, she worked for 11 years at Intermountain Healthcare as a senior librarian. There she provided library services for healthcare professionals, administrative staff, residents, students, and patients and their families. She worked to create a gateway for clinicians and others to access evidence-based medical information, and played a leadership role in coordinating corporate-wide availability of online biomedical resources.

Erica grew up in Maine, Pennsylvania, and Virginia, and received a B.A. in Fine Arts from Virginia Tech. While working at the National Gallery of Art in Washington, DC, she met the administrators of the gallery's library and discovered her future career. After earning her Masters Degree in Library and Information Science at Indiana University, she worked in academic, public, and special libraries, before entering the field of hospital librarianship in 1999.

This healthy librarian has lived in Salt Lake City since 1997, and is happy to call it home. When she is not at work, she enjoys doing anything outdoors with her 16 and 10 year old sons, her husband, and her border collie. She became enthralled with trail running several years ago, and regularly runs trail marathons and 50-mile races on mountain trails. Erica thoroughly loves her profession, and receives great satisfaction knowing she contributes to improved patient care. She is delighted to be a part of the Eccles Library team.
Erica Lake and Sam (Sung-Eun) Yu at the Hope Fox Eccles Health Library

EL - May 9, 2011
New Consumer Health Library for University of Utah Health Care

My doctor just told me I have type II diabetes. Now what do I do?

Everyone says I have to lower my BMI. I don't know what that means.

I want to join an ALS patient support group. Is there one near my home?

The need for reliable and clear consumer health information has never been greater. University of Utah Health Care provides 850,000 inpatient and outpatient visits annually, with 10,000 people passing through the front doors of the University Hospital daily. With the opening of the Hope Fox Eccles Health Library in March, every one of these visitors now has convenient access to quality health information — information that can lead to better decision making, and ultimately, improved health care.

The Health Library was funded through a generous donation from the George and Dolores Doré Eccles Foundation, and through the support and commitment of the Spencer S. Eccles Health Sciences Library and University of Utah Health Care. Located off the University Hospital's main lobby, it offers an inviting, comfortable, and contemplative environment for information seekers. All patients, their families, and the general community are welcome.

The friendly and knowledgeable staff can locate, print, email, and mail relevant health information for visitors free of charge. Five computer workstations are available for accessing trustworthy online resources. A professional medical librarian can help visitors better understand their health issues, and is available to speak with groups about health information websites.

You can reach the Health Library by:

- Stopping by in person. University Hospital's main lobby, next to Starbucks
- Calling 801-581-4685
- E-mailing healthlibrary@lists.utah.edu
Hope Fox Eccles Health Library website

EL - May 8, 2011
40th Anniversary of the Spencer S. Eccles Health Sciences Library: Part I

This year the Spencer S. Eccles Health Sciences Library celebrates its 40th Anniversary. The library opened its doors on September 2, 1971; the formal opening was celebrated in early October 1971. The history of the health sciences library is the culmination of many years of growth going back to the beginning of the 20th century. As the new campus grew with the first buildings on President’s Circle, the library was a part of the campus library, first in the Liberal Arts Building, (later the Leroy Cowles Building) which opened in 1902, then in the Administration Building, (later named the John R. Park Building) completed in 1914 and finally the George Thomas Library Building completed in 1935.

In the mid-1940s, the medical school began its four year curriculum and pressure built to enhance library services and collections. A 1944 review of the medical school and library support noted that although there were over 8,000 volumes and 83 subscriptions devoted to medicine at the Thomas Library, there was no support for the clinical education for medical student years 3 and 4 at the County Hospital. A clinical branch collection was soon started and more attention was paid to the needs of the expanded medical
school.

In 1947, Isabelle T. Anderson was hired to provide guidance and expertise. She strengthened the serials collection, consolidated the medicine, pharmacy, and dental collections, began the History of Medicine collection, broadened the services at the County Hospital and still had time to host the Medical Library Association's (MLA) annual meeting in 1953. She also became the President of the MLA in 1957. When Ms. Anderson left Utah in 1955, Robert Divett was named head of the medical division of the University's library. He stayed until 1962 when he accepted a position at the University of New Mexico.

In 1965, Priscilla M. Mayden, the Chief Librarian at the Veterans Administration Hospital in Salt Lake City was asked by the Dean of the Medical School to become the Medical Librarian at the University of Utah. At that time, the new University Medical Center on the east side of campus was already complete and the County Hospital branch library had been moved into the "B" Level of the building. There was mounting pressure to bring the materials from the Thomas Library as well and to separate from the campus library.

Priscilla's first task was to assist with planning and building a new medical library. That included writing a building program document and applying for funding from the Medical Library Assistance Act of 1965 sponsored by the National Library of Medicine. With the grant application complete, there was still much to be done while waiting for NLM's decision. In August 1967, 71,000 books, journals and monographs were moved from the Thomas Library to the "B" Level of the Medical Center. The allotted 3,200 square feet space had to be upgraded from an unimproved storage space with dirt floor and overhead, leaky pipes to a functional library. Old stacks were disassembled at the Thomas Library and re-assembled in the new space; material was packed onto carts, transported and off loaded by crews of students and university personnel. Ventilation was poor and there was no air conditioning, so it was a very difficult move. When the move was complete, there was study space for 38,
staff work area for 10 and only one small office for the director.

From 1968 to 1971, Priscilla continued her work on fund raising, program design and construction of the Spencer S. Eccles Health Sciences Library. NLM had awarded the last of their federal funding from the Medical Library Assistance Act. Additional funding was secured from foundations and the Eccles family. The site then had to be approved and that was no easy task considering it had been a much desired parking lot. The current site was chosen to become part of a corridor which would link the Medical Center Building, the Library, the Nursing and the Pharmacy Buildings. The groundbreaking took place in November, 1969 and after several years the building was opened and dedicated October 4, 1971.

The time since the Eccles Library dedication has been exciting for both the health sciences campus and library faculty. Part II in our next issue will discuss highlights of the last 40 years.
University of Utah Health Care services recently launched MyChart, which allows patients to access their electronic medical record (EMR) online. Patients wanting to access this service can go to the MyChart website and request an access code. The code is mailed out promptly, and the online setup process is simple and straightforward. In order to protect your privacy, after a few minutes of inactivity, the system logs you out.

MyChart allows you to:

- View your health summary, current medications and test results
- Request medical appointments
- Request prescription renewals
- Track your immunization history
- Communicate electronically and securely with your medical care team
- Access trusted health information resources

You can even create and print a wallet card with important medical information. This last feature is handy in the event of an emergency that renders the patient unconscious, providing valuable information to emergency medical personnel. For families, parents can set up MyChart so they have access to their children’s health information. Simply drop by your local clinic and request access, and it will be added to your MyChart account within 10 business days.

In addition, patients with an iPhone or iPod touch can download an application to access this same system from their mobile device. Once your online account is setup in MyChart, you simply enter your username and password to enter the system. The mobile interface presents you with six options:

- Test results
- Messages
- Appointments
- Ask My Doctor
- Preventive Care
- Health Summary
At the time of this writing, access to trusted health information resources is still under development. It will eventually link with MedlinePlus Connect from the National Library of Medicine. This service allows any electronic health record (EHR) system to easily link users to MedlinePlus, an authoritative up-to-date health information resource for patients, families and health care providers. MedlinePlus provides information about conditions and disorders, medications, and health and wellness.

MyChart is an evolving, valuable tool for individuals to track and maintain their personal health. But what if a person changes healthcare services? How do they take this information with them?

Enter the personal health record, or PHR. An EMR is different from a PHR. As reviewed in the Spencer S. Eccles Health Sciences Library's InfoFair 2010, a PHR is kept by the individual. As the keeper of the PHR, the individual patient maintains a summary record of their health and well-being. This information can be shared with healthcare providers at the direction of the patient.

How the EMR and PHR will interact is still developing, and medical librarians at Eccles Library and elsewhere are advocating for standardization and consistency across the field of health information technology.

TV-May 8, 2011
NOVEL Presented at NANOS 2011

The Neuro-Ophthalmology Virtual Education Library (NOVEL) is an open access, discipline specific repository of multimedia (images, videos, lectures and other digital media) to support neuro-ophthalmology professionals, educators, students and patients. This collaboration between the North American Neuro-Ophthalmology Society (NANOS) and the Spencer S. Eccles Health Sciences Library of the University of Utah creates a unique model for digital collection development. NANOS members are enthusiastic about the project and have committed a great deal of time and energy in providing content, metadata, and peer review.

The NANOS 2011 Annual Meeting was held February 5-10 in Vancouver, Canada. Nancy Lombardo, Associate Director for Information Technology, presented on NOVEL in three separate venues at the meeting. Jeanne Le Ber, Associate Director for Research and Education attended and presented on Endnote and Google Sites for collaboration.

1. An overview of progress on the project during the last year was presented to the NANOS Executive Board on Saturday, February 5. The Board was presented with a breakdown of the project finances, statistical information and highlights of improvements to the collections and Web site during the past year. The new Mobile version of the site was unveiled.
2. A 3-hour Optional Symposium for all NANOS attendees was offered on February 7. This session provided an update to NOVEL: the Neuro-Ophthalmology Virtual Education Library. Many enhancements have been made to the digital library, and new collections are available. In addition to the new Mobile access site, the complete archives of the Journal of Neuro-Ophthalmology are now available in NOVEL, and the NANOS Annual Meeting Syllabi are being indexed and added. An historical collection featuring prominent Neuro-ophthalmologists and Society archives has also been established.
3. Following the NOVEL update, Nancy gave
a presentation demonstrating use of QR Codes to deliver information to mobile devices, and on useful mobile applications. Strategies were outlined for accessing mobile information. Jeanne presented on Endnote and the sharing of libraries for research and publication and on using Google Sites for online collaboration. Ed Fitzgibbon of the National Eye Institute joined in this session and highlighted useful online tools.

4. A Poster was presented throughout the meeting at the general session which was open to all meeting attendees. The poster covered an overview of the project during the last year, with highlights from new collections, website enhancements and usage statistics.

All NOVEL related materials presented at the NANOS 2011 meeting will be available for viewing and downloading on the NOVEL website. The PowerPoint presentations, the poster and all handouts in PDF format can be found online. Contact Nancy Lombardo if you have any questions; 801-581-5241.
Greetings From the New Education Services Librarian

My name is Amy Honisett; I am the new Education Services Librarian at the Spencer S. Eccles Health Sciences Library. As Jeanne LeBer is now the Associate Director for Education and Research, I will be taking over some of her responsibilities and activities.

I am available to work with faculty to integrate library services into curricula and to create classes that incorporate library resources. Additionally, I am available to help create class assignments to help students learn about library resources and understand how these tools can be used in their fields of study and in real-life situations.

The library continues to offer classes in various software tools like EndNote and Excel, as well as provide instruction in the use of resources and databases like PubMed. These classes are available to students, staff, and faculty. You can see a list of classes and sign up on the Eccles Library website by clicking the Workshops @ the Library link. Please be sure to let me know if you do not see the class that you need, or use this link to Suggest a Class.

If you are more interested in self-paced learning, you may be interested in our Online Tutorials Campus Guide, which you can find by clicking the Research Guides link on the Eccles Library home page. Again, please let me know if we do not offer a tutorial that you would like to see.

The library offers tours and orientations to familiarize users with library resources and services, as well as giving tours of the Health Sciences Education Building (HSEB). We also provide training on the numerous tools available at the podium in HSEB classrooms.

You can reach me at amy.honisett@utah.edu, by phone at 801-587-9246, or stop by my office (room 202) on the second floor of the Eccles Library. I am available Monday - Friday from 8:30 a.m. - 5:30 p.m. and I look forward to hearing from you.

AEH - May 26, 2011
Eccles Library Wins!!

The National Library of Medicine's Video Contest

NLM & You: The Video

The Spencer S. Eccles Health Sciences Library collaborated with the University of Utah Department of Biomedical Informatics to submit an entry in the NLM & You: The Video contest this spring. The contest supported the National Library of Medicine's mission of publicizing the availability of its information products and services. The public was invited to create original short videos to promote awareness of NLM products and services. The Eccles Library entry highlighted MedlinePlus, a consumer health information resource, in a scenario where a child with a peanut allergy used the resource to learn more about it and educate his classmates.

We began our efforts only one week before the deadline. A script was written, locations were identified, the school was contacted, permissions were granted and the narrative was recorded. After a weekend full of videotaping, we had nearly four hours of footage. Derek Cowan, the library videographer, masterfully whittled the footage to a highly entertaining 52 second video clip, telling the story and emphasizing the value of MedlinePlus.

There was one $1,000 grand prize winner, and our video, James and the Peanut Allergy, won it! The videos of the grand prize winner and the runners up will be featured on NLM's website. The video was played for the membership at the recent Medical Library Association meeting in Minneapolis, Minnesota. We are extremely pleased with the results of the effort and hope you will use these links to enjoy it yourself.
James - Peanut Allergy; award winning NLM video

NTL - May 26, 2011
Workshops @ the Library

Spencer S. Eccles Health Sciences Library faculty and staff offer workshops, classes and training opportunities to assist the University community in their use of quality information resources, databases, tools and applications.

Our [Workshops @ the Library](http://ojs.med.utah.edu/index.php/esynapse/rt/printerFriendly/175/293) Web page makes registering for classes easy and convenient. Registration is required for all classes. Click on the title of the class you want to attend, then click on the date and fill in the requested information and submit. The classes list has been updated for the Summer 2011 semester.

Classes Can be Scheduled on Demand

On-demand classes or consultations can be scheduled by contacting the instructor or [Education Services Librarian](mailto:); 801-587-9246.

Integrating Library Classes into Course Content

University faculty are encouraged to consider integrating library classes into their course content. Library faculty are willing to develop and teach classes that meet specific information needs and will respond to requests for instruction on a specific resource. Course-integrated library and technology instruction that is centered on a specific class assignment is most helpful to students.

If you do not see a class listed that you would like to see us offer, see our [Suggest A Class](http://ojs.med.utah.edu/index.php/esynapse/rt/printerFriendly/175/293) form.

jml-5/31/2011
Eccles Library Faculty and Staff Professional Activities

The following is a list of Spencer S. Eccles Health Sciences Library faculty and staff professional activities from June 2010 through May 2011.

PUBLICATIONS

MEETINGS

CONTENTdm Western Users Group Meeting
June 3, 2010, Salt Lake City, UT
Presentation
Morrow, Anne, Lisa Chaufty, Kinza Masood, Nancy Lombardo and Dave Adams. Special Topics in University of Utah Libraries' Digital Collections.
