Clifford C. Snyder, M.D. and Mary Snyder Lecture Abstract

Patients at the Center of an Innovation Platform: Personally Controlled Health Records and the App Store for Health

The Obama Administration is investing $48 billion in health information technology to support an agile, learning healthcare system. This plenary will show how radically different approaches to patient-centered computing systems can produce a flexible information infrastructure that supports and facilitates innovation not only in healthcare and public health but also scientific discovery.

Attendees will learn about personally controlled health records and their emerging role for wellness, disease management, population health monitoring, research, and health information exchange. They will get a glimpse into a transformative project in HIT creation of the app store for health.
