2010 Priscilla M. Mayden Lecture

Genetics/Genomics and Biomedical Informatics: Two Rivers Merging

Joyce Mitchell, Ph.D., FACMI, FACMG
Professor, Biomedical Informatics
Department Chair, Biomedical Informatics

Dr. Mitchell’s talk focuses on the growth of large data sets in the aftermath of the Human Genome Project, the rise of a consumer health movement focused on genomic/genetic questions, and the push for electronic medical records as part of the ARRA HIT Stimulus funds. These forces are coming together to create a perfect storm for Personalized Healthcare with a focus on the use of genomics data in patient care and the need for clinical decision support in the genomics space.

Thursday, February 11, 2010 - 4:00-5:00 P.M.
Spencer F. and Cleone P. Eccles Health Sciences Education Building, Room 1730

Sponsored by the Spencer S. Eccles Health Sciences Library
This lecture is provided by the Priscilla M. Mayden endowment.
