

## **An Easy to use Tool for the Rapid Creation of e-Learning Applications.**

**Robert J. McAuley, PhD**

**University of Illinois at Chicago College of Medicine, Chicago, IL, USA**

### **Summary:**

Creating effective and polished online demonstrations and simulations once required a significant amount of time and the services of dedicated programmers with specialized knowledge and skill sets. This demonstration will expose users to a commercial Windows based tool that will allow them to easily create multimedia Flash based e-learning applications, quizzes, and demo support movies in a short time frame. Because the resulting applications are created in Flash they can be used across browsers and operating systems.

Dr. McAuley will show several tutorials he has created and will allow users to try the software and create short applications of their own.

### **Demonstration Objectives:**

To show participants that the rapid development of effective e-learning modules can be achieved without a committed development staff or specialized skill sets.

The tool used in this demonstration is Adobe Captivate.
