UMPC or Ultra Mobile Personal Computers (previously under the code name Origami, <http://www.microsoft.com/windows/products/winfamily/umpc/default.msp>) are the latest devices to be announced by Microsoft. Originally, envisioned as a tool targeting the entertainment/home space, it has found a place in some business, education and professional markets. This demo session will compare the critical feature sets of a variety of small devices including the cell phone, pocket PC, UMPC, Tablet PC and even sub-\$300 wireless tablet devices. We can discuss their use in a health education or hospital setting. We will also explore common threads that can tie all these disparate devices together.
