

ACADEMIC PERFORMANCE COMPARISON OF TABLET PC USERS AND NON-USERS IN MEDICAL STUDENT EDUCATION

**Heidi Nickisch Duggan, M.A., Barry G. Timms, Ph.D., and Edward Simanton,
Ph.D. Sanford School of Medicine, Vermillion, South Dakota, USA**

This breakout session will provide a forum for medical educators to discuss the findings and implications of the results of our comparative analysis between tablet and non-tablet pc users. Tablet PCs have been used for both teaching and learning experiences over a period of three years. Most of the benefits now appear to be student directed. The consequences of this paradigm shift should provide the stimulus for an interesting discussion.

BENEFIT TO PARTICIPANTS ATTENDING SESSION:

This session will provide participants with a summary of experiences with the Tablet PC technology and an opportunity to discuss trends in learning experiences.
