Moab woman contracts West Nile fever

Nance says it's the less severe form; Salt Lake resident has 'potentially deadly' form of the virus

By Doug McMurdo Aug. 20, 2019

The Moab Mosquito Abatement District said a Moab woman in her 50s has contracted the less severe form of West Nile virus. Manager Libby Nance in an email said the woman, who lives south of town, was diagnosed at a clinic in Moab, which was confirmed by the Utah Department of Health.

COMMUNITY HEALTH

orcas who feed on them.

replaced the vibrant fields of coral I'd expected to see. I've gone diving around the globe to Indonesia, Africa and Tahiti, to name a few. Everywhere the story is the same. Coral is disappearing in the tropics. Schools of sardines which feed marine mammals and fish are languishing in the Galapagos. The Fjords of Norway are too warm for herring to feed, forcing them into the open ocean and displacing

I'm a recreational scuba diver who's very distressed by the gradual but devastating changes to the ocean environment as sea temperatures rise. I've been diving for over 30 years and have traveled to Palau following a warming El Nino. Crumbling gray rubble had

Nonpartisan scientists (those not affiliated with fossil fuel industries) tell us these changes are mainly caused by excess fossil fuel use. I urge us to join together, in a nonpartisan fashion, as our communities have done with other natural calamities, to solve this problem so our world can sustain life in all its glorious forms.
